Vijay Jayamani and Khushi Thakkar
Industry:
Education & Technology
Year founded:
2025
Number of Employees: 2
Funding Need:
[$50,000-$100,000]
Use of Funds:
45% Product Development
30% Marketing/Sales
15% Operations
10% Legal/Other

Business Thesis:
UniFlex is a scheduling platform that helps students manage academics, extracurriculars, and events by integrating schedules with club and organization engagement. It enhances student participation and streamlines coordination for both students and universities.

Problem/Opportunity:
Students struggle to align academic schedules with clubs and events due to a lack of an integrated platform. GW Engage lacks real-time scheduling and communication methods, making coordination difficult. Customer discovery shows 75% of students find scheduling a challenge, and club leaders struggle with recruitment and retention. UniFlex addresses these issues by synchronizing student availability with engagement opportunities.

Solution/Value Proposition:
UniFlex integrates academic schedules, extracurriculars, and events into a real-time scheduling tool. It maps student availability to meetings, allowing easy filtering by interest. By centralizing event details, UniFlex helps club leaders optimize scheduling, reduces conflicts, increases engagement, and streamlines communication efforts to club members. Universities gain insights to improve retention. With 67% of students seeking better visibility, UniFlex streamlines campus connectivity.

Potential Revenue Model:
UniFlex generates revenue through annual university licensing and department-specific advertising. GW pays $15,000 annually, while departments are charged $2,000 per month for targeted outreach. This results in lifetime values of $150,000 per university and $72,000 per department, with customer acquisition costs of $6,000 and $3,400, respectively. The digital campus engagement sector is growing at a 10.2% CAGR, reflecting strong demand for scalable student engagement tools. UniFlex's model supports 70–80% gross margins and 35–45% net profit margins, enabling sustainable growth .A third revenue stream from digital ads will launch at 200K users, generating over $60K/month.

Execution Plan/Go-To-Market Strategy:
UniFlex will use prize funding to advance product development, market testing, and early sales efforts. We'll begin with a beta test at George Washington University, using feedback to refine features like scheduling and department ad tools. Funds will also support marketing to boost engagement and convert pilot results into paid university and department contracts. Key milestones include a working prototype, CAC/LTV projections, and initial university interest. Next steps include completing the MVP, securing our first licensing deal, and onboarding department advertisers—positioning UniFlex for scalable growth in higher education.

Financials:
UniFlex is seeking $100,000 to complete product development, launch marketing, and onboard early university and department partners. With minimal current capital and a projected burn rate of $8,000/month, this funding will sustain operations for about 12 months. Revenue will be generated through $15,000/year university licenses and $2,000/month department ads, with future growth focused on expanding institutional and recruiter partnerships.

The Team/Relevant Experience:
Vijay Jayamani, a senior in Systems Engineering, leads strategy and partnerships. His work with MakeSpace and GW Startup Avenue has strengthened his ability to build networks and drive adoption. Khushi Thakkar, a senior in Computer Science, leads product development, applying her technical expertise and marketing experience from 1-800-Flowers to enhance UniFlex's functionality. They collaborate with mentors from GW's Office of Innovation and Entrepreneurship to ensure UniFlex's success in educational technology.
